Hiring Team
Zealous Services
Full Stack Developer

I'm writing to apply for the Full Stack Developer role at Zealous Services. As a Software Development Engineering Intern at Clink AI, I build complete features end-to-end — React frontends, REST APIs, and the databases behind them — and I bring real production PHP/MySQL experience from a prior internship at ITJOBXS alongside my current React/Node stack.

At ITJOBXS, I built a real-time REST API for email domain validation that cut spam registrations by 87.34%, and used MySQL queries to purge 600+ fake accounts and fix a critical storage overload — hands-on PHP/MySQL work this role calls for. My project work adds the React/REST API/PostgreSQL range: Echo and Vibe are full-stack platforms with REST APIs, PostgreSQL, and JWT/OAuth authentication.

I bring strong PHP, Python and JavaScript fundamentals, hands-on REST API and database experience (MySQL, PostgreSQL, MongoDB), Git version control, and a fast ramp-up track record — I'm comfortable picking up Laravel and FastAPI quickly to fit this team's stack.

Why I'm a fit for Full Stack Developer at Zealous Services:

- Built a production REST API and MySQL-backed spam-prevention system at ITJOBXS (87.34% spam reduction, 600+ fake accounts purged)
- Built Echo and Vibe — full-stack SaaS platforms with REST APIs, PostgreSQL databases, and JWT/OAuth authentication
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Proven fast ramp-up across new languages and stacks — shipped 8+ production screens and 400+ Mixpanel analytics events within a single year

Sincerely,
Rajat Gangwar
