Hiring Team

TopGrep Tech Private Limited

Software Developer (Go / Rust)

I am writing to apply for the Software Developer (Go / Rust) role at TopGrep Tech. As a Software Development Engineering Intern at Clink AI, I work across the full MERN stack, building REST APIs and scalable backend services shipped to 1300+ users, with strong data structures and algorithms fundamentals from competitive programming.

My project work is backend-focused: Echo is a full-stack SaaS platform with a multi-tenant, microservices-style architecture across 7 workspaces exposing REST APIs; Vibe runs on a Node.js/tRPC/REST backend with a PostgreSQL database and Docker-based containerized execution — the same emphasis on clean, well-documented backend code and microservices your role calls for.

While my hands-on experience is currently in Node.js rather than Go or Rust, I have a track record of ramping quickly on new languages and stacks — I have picked up React Native, TypeScript, and MobX on the job in under a year — and I am ready to bring that same speed to Go/Rust backend development.

Why I'm a fit for Software Developer (Go / Rust) at TopGrep Tech:

- Built Echo and Vibe, full-stack SaaS platforms with microservices-style architecture, REST APIs, and MongoDB/PostgreSQL databases
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved
- MERN stack proficiency with Git/GitHub-tracked code reviews and clean, production-ready code at Clink AI
- Proven fast ramp-up across new languages and frameworks — shipped 8+ production screens and 400+ analytics events in under a year

Sincerely,

Rajat Gangwar
