Hiring Team
AppVersal
Golang Developer Intern

I am writing to apply for the Golang Developer Internship at AppVersal. As a Software Development Engineering Intern at Clink AI, I design and build scalable backend services and REST APIs shipped to 1300+ users, with a strong CS foundation in concurrency, data structures, and systems design from competitive programming.

My project work is backend-focused: Echo is a full-stack SaaS platform with a multi-tenant, microservices-style architecture across 7 workspaces, exposing REST APIs consumed by an AI agent; Vibe runs on a Node.js/tRPC/REST backend with a PostgreSQL database and Docker-based containerized execution — the same emphasis on scalable services, APIs, and production reliability your internship calls for.

I have hands-on experience with PostgreSQL, MongoDB, Redis, Docker, and AWS, plus a track record of ramping quickly on new languages and stacks — I have picked up React Native, TypeScript, and MobX on the job in under a year, and I am ready to bring that same speed to Go.

Why I'm a fit for Golang Developer Intern at AppVersal:

- Built Echo and Vibe, full-stack SaaS platforms with microservices-style architecture, REST APIs, and Docker-based containerized services
- Hands-on with PostgreSQL, MongoDB, Redis, and AWS across production projects
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong concurrency and systems-design fundamentals
- Proven fast ramp-up across new languages and frameworks — shipped 8+ production screens and 400+ analytics events in under a year

Sincerely,
Rajat Gangwar
