Hiring Team
Quanteon Solutions
AI/ML Engineer

I'm writing to apply for the AI/ML Engineer role at Quanteon Solutions. As a Software Development Engineering Intern at Clink AI, I ship full-stack features end-to-end, and outside of work I've built multiple production-grade generative AI systems — RAG pipelines, LLM agents, and voice AI — which is the applied-AI layer this role calls for, alongside a genuine interest in deepening the classical ML/DL side.

My project work reflects real experience with the generative AI stack: Echo is a full-stack B2B SaaS platform with a retrieval-based RAG pipeline over vector embeddings, an LLM agent with tool calling across 3 typed tools, and real-time voice agents built on Vapi delivering 99% uptime in production. Vibe is an AI code-generation platform with a multi-agent workflow, LLM-driven code synthesis, and asynchronous processing pipelines with retry and failure recovery — hands-on experience with agentic AI, prompt engineering, and production LLM integration.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), Python familiarity, and a fast ramp-up track record — I'm comfortable deepening my classical ML/DL stack (NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch) and model fine-tuning experience quickly to round out this role's full scope.

Why I'm a fit for AI/ML Engineer at Quanteon Solutions:

- Built Echo and Vibe — production systems with RAG pipelines, LLM tool-calling agents, voice AI, and agentic workflows
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on generative AI integration at production scale: vector search, prompt engineering, and structured LLM outputs
- Proven fast ramp-up track record — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,
Rajat Gangwar
