Hiring Team

HookUX

Full Stack Developer

I'm writing to apply for the Full Stack Developer role at HookUX. As a Software Development Engineering Intern at Clink AI, I build complete features end-to-end — React/React Native frontends, Node.js/Express APIs, and the data layer connecting them — and I'm excited by the idea of building a gamified financial-literacy product for the next generation of investors.

My project work reflects the same full-stack range this role calls for: Echo is a full-stack B2B SaaS platform (Next.js frontend, Node-based backend, PostgreSQL/Convex data layer) with a RAG pipeline and real-time voice agents. Vibe is a SaaS platform combining a React frontend, tRPC/Node backend, and PostgreSQL via Prisma, with a secure Docker sandbox for running generated code — the same frontend-to-backend-to-database ownership this role needs.

I bring strong JavaScript, TypeScript and Python fundamentals, hands-on REST API and database experience (PostgreSQL, MongoDB), Git-based version control, and a fast ramp-up track record — I'm comfortable picking up Vue.js, AngularJS, and Django quickly to fit this team's stack.

Why I'm a fit for Full Stack Developer at HookUX:

- Built Echo (full-stack SaaS platform: Next.js, Node, PostgreSQL/Convex, REST APIs) and Vibe (React frontend, Node/tRPC backend, PostgreSQL via Prisma, Docker sandboxing)
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on full-stack ownership at Clink AI: React/React Native frontend, REST API-driven Redux state, and CI/CD release pipelines
- Proven fast ramp-up across new languages and stacks — shipped 8+ production screens and 400+ Mixpanel analytics events within a single year

Sincerely,

Rajat Gangwar
