Hiring Team

InCommon

Frontend Agentic Engineer

I am writing to apply for the Frontend Agentic Engineer role at InCommon. As a Software Development Engineering Intern at Clink AI, I build full-stack, production-grade features across React, React Native, Next.js, and TypeScript, using agentic coding tools (Claude Code, Cursor) daily to move faster from prototype to production while keeping code review and quality standards intact.

My project work is built around AI agents and LLM tool calling: Echo is a full-stack B2B SaaS platform with a RAG pipeline, vector search, and a support agent using LLM function/tool calling with agent-integration-ready tooling. Vibe runs an autonomous AI coding agent in an agentic loop across a secure, Docker-built sandbox — the same agent-integration and AI-native product thinking your team is extending into established products.

I am full-stack across the languages your listing calls for — JavaScript/TypeScript, React, Angular, Python, and Node.js — and I am comfortable working end-to-end on data models, services, and interfaces alongside cross-functional teams, with a fast ramp-up track record.

Why I'm a fit for Frontend Agentic Engineer at InCommon:

- Use agentic coding tools (Claude Code, Cursor) daily in production work at Clink AI — code reviews, Git/GitHub-tracked fixes, and AI-assisted development at scale
- Built Echo, an AI support agent with LLM function/tool calling, RAG, and vector search — directly relevant to MCP-based agent integration
- Built Vibe, an autonomous AI coding agent running an agentic loop across 3 tools in a secure Docker/E2B sandbox — full-stack prototype-to-production delivery
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong engineering fundamentals across languages and frameworks

Sincerely,

Rajat Gangwar
