Hiring Team

HyrHub

Backend Engineer (Python, Golang)

I'm writing to apply for the Backend Engineer (Python/Golang) role. As a Software Development Engineering Intern at Clink AI, I design and build backend systems end-to-end — REST APIs, database-backed services, and CI/CD pipelines — and I bring strong CS fundamentals in data structures, algorithms, and object-oriented design to back it up.

My project work shows the same backend and systems thinking this role calls for: Echo is a full-stack platform with a scalable multi-tenant architecture and REST APIs serving production traffic with 99% uptime. Vibe pairs a Node backend with a secure containerized sandbox for safely running generated code and a durable, checkpointed workflow engine — the kind of reliability-focused backend design this role needs, and I'm comfortable applying that same thinking in Python or Go.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), hands-on REST API and database experience, familiarity with Linux-based development, and Git-based version control — a strong foundation for ramping up quickly on this team's stack.

Why I'm a fit for Backend Engineer (Python, Golang) at HyrHub:

- Built Echo and Vibe — backend systems with REST APIs, microservices-style architecture, and PostgreSQL/MongoDB databases
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on backend ownership at Clink AI: REST API-driven state management, database-backed features, and CI/CD release pipelines
- Proven fast ramp-up track record — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
