Hiring Team

DataVinci Private Limited

Junior Analytics Engineer

Dear Hiring Team,

I'm writing to apply for the Junior Analytics Engineer role at DataVinci. I bring hands-on experience with **SQL** and **PostgreSQL**, backend **API** integration, and building data-driven dashboards from production event data — a strong foundation for preparing, cleaning, and transforming backend data for reporting and automation.

At Clink AI, I queried and validated **PostgreSQL**-backed data through **REST APIs** and instrumented 400+ Mixpanel events across 25+ user flows, powering 5 client-facing dashboards and 35+ funnel/retention reports used for stakeholder analysis. In my Skimly project, I engineered a document **data pipeline** on raw **PostgreSQL**, writing and optimizing **parameterized SQL queries** for data ingestion, retrieval, and validation.

I'm comfortable working directly with **API** structures and **JSON** for data fetching, and I document my logic and metrics clearly for non-technical stakeholders. I'm also actively building on cloud platforms (**AWS**, **GCP**) and BI tools (**Power BI**, **Looker Studio**) to round out this skill set for data engineering work.

Why I'm a fit for Junior Analytics Engineer at DataVinci:

- Built and validated **PostgreSQL**-backed data flows and **REST API** integrations at Clink AI, powering 5 dashboards and 35+ funnel/retention reports from 400+ instrumented events
- Engineered a raw-**SQL** data pipeline (Skimly) — hand-written **PostgreSQL** schema, optimized parameterized queries for ingestion, retrieval, and validation
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong analytical and problem-solving foundation for working with raw data
- Fast ramp-up ability: React/JS-rooted engineer who has quickly picked up new stacks (Redux, MobX, Convex, raw SQL) across every internship and project

Sincerely,

Rajat Gangwar
