Hiring Team

TransFi

MERN Full Stack Developer

I'm writing to apply for the MERN Full Stack Developer role at TransFi. As a Software Development Engineering Intern at Clink AI, I build complete features end-to-end on the MERN stack — React frontends, Node.js/Express APIs, and MongoDB-backed data layers — and I'm drawn to what TransFi is building in crypto on/off-ramping.

My project work reflects direct MERN experience: Echo is a full-stack SaaS platform with a Node-based backend, MongoDB/Convex data layer, and a React/Next.js frontend serving real-time, multi-tenant workloads. Vibe pairs a React frontend with a Node/tRPC backend and a secure sandboxing layer for running generated code — the same design-to-implementation ownership this role calls for, including RESTful API design and Server-Oriented Architecture thinking.

I bring strong JavaScript and TypeScript fundamentals, hands-on React/Node/MongoDB experience, unit testing and code review practice, and a fast ramp-up track record — I'm comfortable picking up Angular and Web3.js quickly to fit this team's stack.

Why I'm a fit for MERN Full Stack Developer at TransFi:

- Built Echo and Vibe: React/Next.js frontends, Node.js backends, MongoDB/PostgreSQL databases, and RESTful APIs
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on full-stack ownership at Clink AI: React/React Native frontend, REST API-driven Redux state, and CI/CD release pipelines
- Proven fast ramp-up and mentoring track record — trained 100+ students in DSA/resume building, and shipped 8+ production screens within a single year

Sincerely,

Rajat Gangwar
