Hiring Team

Parsons Corporation

Software Developer Intern - Fall 2026/Spring 2027 (Job ID: R185565)

Dear Hiring Team,

I'm excited to apply for the Software Developer Intern role on Parsons' Critical Infrastructure team. As a B.Tech graduate from NIT Prayagraj with hands-on full-stack experience across React, Node.js, and SQL-backed systems, I'm drawn to the chance to build production web applications that support real infrastructure work.

In my current role as an SDE Intern at Clink AI, I build responsive front-end interfaces and REST API-driven back-end features, work directly with SQL and NoSQL databases, and use Git for version control across a fast-moving codebase shipped to 1300+ users. I've also built several full-stack projects independently – from a multi-tenant SaaS platform to a raw-SQL-backed AI tool – giving me practical exposure to both front-end and back-end development end to end.

I'm comfortable picking up new stacks quickly: I already work daily across JavaScript, TypeScript, Python, and SQL, and I'm actively getting familiar with .NET, C#, and SQL Server to round out my readiness for this role's Microsoft-centric back-end. I collaborate well in cross-functional teams and enjoy debugging and problem-solving as much as building new features.

Why I'm a fit for Software Developer Intern at Parsons:

- Built and shipped full-stack web features (React, Node.js, REST APIs) to 1300+ production users as an SDE Intern at Clink AI, including front-end UI, state management, and API-driven data flows.
- Hands-on with relational databases (PostgreSQL, hand-written SQL in my Skimly project) and version control (Git) across every project I've built.
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved, reflecting strong data problem-solving and analytical skills.
- Fast ramp-up ability: comfortable moving across React/Angular-style component models, JavaScript/TypeScript, and multiple server-side languages (Node.js, Python, C++).

Sincerely,

Rajat Gangwar
