Hiring Team

Oracle

Application Software Engineer 1 (Job ID: 344317)

I'm writing to apply for the Application Software Engineer 1 role at Oracle. As a Software Development Engineering Intern at Clink AI, I've built and shipped production features end-to-end, with a strong SQL and debugging foundation — diagnosing and resolving production issues from Sentry crash reports, and writing hand-rolled parameterized SQL for data-heavy features in my own projects.

My project work reflects the data-fetching-and-reporting emphasis this role calls for: Echo is a full-stack SaaS platform with a scalable, multi-tenant architecture; Vibe runs on a PostgreSQL-backed backend with Docker-based sandboxed execution. Both required gathering requirements, planning implementation, and iterating through debugging and root-cause analysis to keep the codebase reliable.

I bring solid programming fundamentals (JavaScript, TypeScript, C/C++, SQL) and a fast ramp-up track record — I'm comfortable picking up PL/SQL and Java quickly, and I'm genuinely excited to learn the Millennium data model and healthcare workflows this role is built around.

Why I'm a fit for Application Software Engineer 1 at Oracle:

- Built Echo and Vibe, full-stack platforms with SQL/PostgreSQL-backed data layers and hands-on debugging via Sentry and DevTools
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved
- Git/GitHub-tracked releases, code reviews, and a habit of clean, production-ready code at Clink AI
- Proven fast ramp-up across new languages and stacks — shipped 8+ production screens and 400+ analytics events in under a year

Sincerely,

Rajat Gangwar
