Hiring Team

Weetech Consultants

Python Full Stack Developer

I'm writing to apply for the Python Full Stack Developer role at Weetech Consultants. As a Software Development Engineering Intern at Clink AI, I build complete features end-to-end — React frontends, REST APIs, and database-backed services — and I bring strong Python fundamentals alongside genuine hands-on experience integrating AI/ML capabilities into production applications.

My project work reflects the AI-integration and full-stack range this role calls for: Echo is a full-stack B2B SaaS platform with a RAG pipeline over vector embeddings and an LLM agent with tool calling, and Vibe is an AI code-generation platform with a multi-agent workflow and asynchronous processing pipelines — direct experience implementing AI/ML concepts within production applications, which this role explicitly asks for. Both are built with REST APIs and PostgreSQL databases, matching the API and database work central to this role.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), hands-on REST API and database design experience, and a fast ramp-up track record — I'm comfortable deepening my Django, Flask, and FastAPI experience quickly to fit this team's Python backend stack.

Why I'm a fit for Python Full Stack Developer at Weetech Consultants:

- Built Echo and Vibe — AI-integrated full-stack platforms with RAG pipelines, LLM tool-calling agents, REST APIs, and PostgreSQL databases
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on full-stack ownership at Clink AI: React frontend, REST API-driven state management, and code review participation
- Proven fast ramp-up track record — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
