Hiring Team

MindBridge

Associate Gen AI Engineer (Catalog Imaging)

I am writing to apply for the Associate Gen AI Engineer role at MindBridge. I have built a full-stack AI image editor (Pixxel) with a Fabric.js canvas and ImageKit's AI transformation APIs, covering exactly the image manipulation and processing work your team does at catalog scale — background removal, generative fill, upscaling, contrast adjustment, and retouching.

Beyond image work, I use prompt engineering daily in production: as a Software Development Engineering Intern at Clink AI, I use agentic coding tools (Claude Code, Cursor) to ship features to 1300+ users, and my Echo project includes an AI agent built with structured prompts and few-shot examples. I have a strong Python foundation from my CS coursework and am comfortable writing and debugging code across languages.

I am excited by the structured 90-day ramp and mentorship model — I have picked up new frameworks quickly before (React Native, TypeScript, MobX in under a year at Clink AI), and I am ready to apply that same speed to Pillow, OpenCV, and image-generation prompt engineering under a senior mentor.

Why I'm a fit for Associate Gen AI Engineer at MindBridge:

- Built Pixxel, a full-stack AI image editor with Fabric.js canvas and ImageKit AI transformations (background removal, generative fill, upscaling, contrast adjustment)
- Daily hands-on with prompt engineering and AI tools (Claude Code, Cursor, OpenAI, Gemini AI) in production work
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved in C++ — strong Python/CS fundamentals and attention to detail
- Proven fast ramp-up on new tools and frameworks — shipped 8+ production screens and 400+ analytics events at Clink AI in under a year

Sincerely,

Rajat Gangwar
