Hiring Team

AmpereHour energy

Golang System Developer

I'm writing to apply for the Golang System Developer role at AmpereHour energy. As a Software Development Engineering Intern at Clink AI, I design and build backend systems end-to-end — REST APIs, database-backed services, and CI/CD pipelines — and I bring strong CS fundamentals in algorithms, networking, and object-oriented design, alongside a genuine interest in systems-level development.

My project work reflects backend and systems thinking, even though it's currently expressed in Node.js/TypeScript rather than Go: Echo is a full-stack platform with a scalable multi-tenant architecture and REST APIs serving production traffic with 99% uptime. Vibe pairs a Node backend with a secure containerized sandbox for running generated code and a durable, checkpointed workflow engine — reliability-focused systems design I'm eager to apply in Go, at a lower level.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), hands-on REST API and database experience, and familiarity with Linux and Git-based workflows — a solid base for ramping up quickly on Go, systems programming, and industrial protocols like Modbus and OPC.

Why I'm a fit for Golang System Developer at AmpereHour energy:

- Built Echo and Vibe — backend systems with REST APIs, distributed-architecture patterns, and Docker-based containerization
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on backend ownership at Clink AI: REST API-driven state management, database-backed features, and CI/CD release pipelines
- Fast ramp-up track record across new languages and stacks — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
