Hiring Team

QuickHyre

Artificial Intelligence (AI) Associate

Dear Hiring Team,

I'm writing to apply for the Artificial Intelligence (AI) Associate role at QuickHyre. I have hands-on experience building **Generative AI** and **agentic** applications end to end — **RAG** pipelines, **LLM function calling**, **prompt engineering**, and vector search — across two production SaaS platforms.

At Echo, I built a **RAG** pipeline using **vector embeddings** and **Convex vector search** for semantic search, and developed an **agentic AI** support workflow with **LLM tool calling** and **NLP**-driven intent handling. In Vibe, I architected an autonomous **AI agent** running an **agentic loop** of up to 15 iterations of **LLM function calling** to iteratively write, execute, and self-correct code inside a secure sandbox.

I'm comfortable working with **Python**, **SQL**, and datasets to support model development, and I document my findings and system prompts clearly for cross-functional teams. I stay current on AI advancements through daily use of tools like **Claude Code**, **Cursor AI**, **OpenAI**, and **Gemini AI**.

Why I'm a fit for Artificial Intelligence (AI) Associate at QuickHyre:

- Built a **RAG** pipeline with **vector embeddings** and semantic search (Echo), and an autonomous **LLM**-agent coding loop with **function calling** (Vibe) — both production SaaS platforms
- Hands-on with **prompt engineering**, structured system prompts, and **LLM tool/function calling** across 6+ Zod-typed tool integrations
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong analytical and problem-solving foundation for **AI/ML** work
- Fast ramp-up ability: consistently picks up new **AI** stacks and frameworks (**RAG**, agentic workflows, vector search) across every project

Sincerely,

Rajat Gangwar
