Hiring Team

Dentsu (Sokrati)

Developer - Entry-Level Full Stack (Job ID: R1128610)

Dear Hiring Team,

I'm excited to apply for the Full Stack Developer role at Sokrati. As a B.Tech graduate from NIT Prayagraj currently building production React and REST API-driven applications as an SDE Intern, I'm well-suited to the full-stack, cross-team environment this role calls for.

I build responsive React.js interfaces and REST APIs daily at Clink AI, working with relational and NoSQL databases and shipping features to 1300+ users. I've also independently built several full-stack SaaS products end to end, including AI-integrated platforms with RAG pipelines and LLM function calling – directly matching the "LLM models and AI integration" you list as a plus.

While my recent backend work has been in Node.js, I'm quickly picking up Python with Flask/Django to round out this role's stack, and I'm comfortable with MySQL, Git/GitHub, and API testing workflows like Postman. I enjoy collaborating closely with designers and product managers, and I bring strong analytical/debugging instincts from solving 1000+ DSA problems.

Why I'm a fit for Developer at Sokrati:

- Built and shipped full-stack features (React.js, REST APIs, relational + NoSQL databases) to 1300+ production users as an SDE Intern at Clink AI.
- Built AI-integrated SaaS products end to end (Echo, Vibe) with LLM function calling and RAG pipelines – directly matching the JD's "good to have" AI integration ask.
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved, reflecting strong analytical thinking and problem-solving ability.
- Fast ramp-up ability: daily use of Git/GitHub, REST API design, and quick pickup of new backend stacks (currently Python/Flask).

Sincerely,

Rajat Gangwar
