Hiring Team

Tata Consultancy Services

Senior .NET Full Stack Developer (LinkedIn Job ID: 4461694094)

Dear Hiring Team,

I'm writing to express interest in the Full Stack Developer role at TCS supporting the crypto-based lending initiative. As a B.Tech graduate from NIT Prayagraj building production React and Python applications backed by PostgreSQL, I bring hands-on full-stack experience and a strong, fast-learning foundation across modern web stacks.

I build responsive React interfaces daily at Clink AI, working with REST APIs and relational databases, and I rely on AI-assisted development (Claude Code, Cursor) the same way this role calls for GitHub Copilot – to prototype, iterate, and ship efficiently. I've also independently built full-stack SaaS platforms with Python-adjacent backends, PostgreSQL data layers, and production deployments end to end.

While my recent backend experience has centered on Node.js and Python (Flask/Django), I'm actively picking up .NET, FastAPI, and Playwright testing to round out my readiness for this role's specific stack, and I'm comfortable with Git, CI/CD concepts, and OWASP-aligned secure coding practices such as parameterized queries and token-based auth.

Why I'm a fit for Full Stack Developer at TCS:

- Built and shipped full-stack features (React, REST APIs, PostgreSQL) to 1300+ production users as an SDE Intern at Clink AI, relying on AI-assisted development (Claude Code, Cursor) daily – the same workflow this role's GitHub Copilot requirement calls for.
- Built full-stack AI SaaS platforms end to end (Echo, Vibe) with secrets management via AWS Secrets Manager, directly analogous to Azure Key Vault usage.
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved, reflecting strong analytical thinking and rapid problem-solving.
- Fast ramp-up ability: comfortable moving across React/Angular-style component models and multiple backend languages/frameworks (Node.js, Python, currently picking up .NET/FastAPI).

Sincerely,

Rajat Gangwar
