Hiring Team

HyrHub

Back End Engineer (Python, Golang)

I'm writing to apply for the Back End Engineer (Python, Golang) role. As a Software Development Engineering Intern at Clink AI, I design and build backend systems end-to-end — REST APIs, database-backed services, and CI/CD pipelines — and I bring strong CS fundamentals in data structures, algorithms, and object-oriented design to back it up.

My project work shows the backend and systems thinking this role calls for: Echo is a full-stack platform with a scalable multi-tenant architecture and REST APIs serving production traffic with 99% uptime. Vibe pairs a Node backend with a secure containerized sandbox and a durable, checkpointed workflow engine — reliability-focused backend design I'm comfortable applying in Python or Go. I'm also a genuine daily user of Claude Code and Cursor for AI-assisted development, directly matching this role's interest in AI-powered development tool familiarity.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), hands-on REST API and database experience across SQL and NoSQL systems, and familiarity with Linux and Docker-based workflows — a solid base for ramping up quickly on this team's stack.

Why I'm a fit for Back End Engineer (Python, Golang) at HyrHub:

- Built Echo and Vibe — backend systems with REST APIs, microservices-style architecture, and PostgreSQL/MongoDB databases
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Daily fluency with Claude Code and Cursor for AI-assisted development, directly matching this role's AI-tools requirement
- Hands-on backend ownership at Clink AI: REST API-driven state management, database-backed features, and CI/CD release pipelines

Sincerely,

Rajat Gangwar
