Hiring Team

Antal International

Java Backend Developer

I am writing to apply for the Java Backend Developer role at Antal International. As a Software Development Engineering Intern at Clink AI, I build production, full-stack features with REST APIs, JSON-based data flows, and centralized state management shipped to 1300+ users, and I bring strong CS fundamentals in Java, C/C++, and SQL alongside my JavaScript/TypeScript stack.

My project work is backend-heavy: Echo is a full-stack SaaS platform with a multi-tenant architecture and REST APIs exposing typed tools for an AI agent; Vibe runs on a Node.js/tRPC/REST backend, backed by a PostgreSQL database, with untrusted code executed in a Docker-built containerized sandbox — the same combination of APIs, databases, and containerized deployment your role calls for.

I have hands-on experience with Docker, PostgreSQL, MySQL, and AWS, plus a track record of ramping quickly on new stacks — I have picked up React Native, TypeScript, and MobX on the job in under a year, and I am ready to bring that same speed to Spring Boot and the Java ecosystem.

Why I'm a fit for Java Backend Developer at Antal International:

- Built Echo and Vibe, full-stack SaaS platforms with REST API layers, PostgreSQL databases, and Docker-based containerized execution
- Strong CS fundamentals in Java, C/C++, and SQL, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved
- Production experience with Git/GitHub-tracked code reviews, automated debugging, and CI/CD-driven release workflows at Clink AI
- Proven fast ramp-up across new languages and frameworks — shipped 8+ production screens and 400+ analytics events in under a year

Sincerely,

Rajat Gangwar
