Hiring Team

Tradelab Technologies

Flutter Developer (Trading/Fintech Domain)

I'm writing to apply for the Flutter Developer role at Tradelab Technologies. As a Software Development Engineering Intern at Clink AI, I ship cross-platform mobile applications end-to-end with a strong focus on state management and real-time data, and I bring the same discipline to Flutter, alongside genuine real-time systems experience relevant to fintech applications.

At Clink AI, I engineered a cross-platform React Native app shipping 8+ screens to 1300+ users and architected a centralized Redux store syncing UI on API-driven updates. My project work adds direct real-time systems experience: Echo delivers WebSocket-based real-time sync with under 100ms latency and 99% uptime in production, and both Echo and Vibe use JWT/OAuth-based authentication and secrets management — the reliability, state-management, and security discipline this fintech role demands. My current mobile stack is React Native rather than Flutter, but the underlying cross-platform mobile concepts transfer directly.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), Git-based version control experience, and a fast ramp-up track record — I'm comfortable picking up Flutter, Dart, and BLoC state management quickly given my depth in React Native's parallel patterns and real-time systems.

Why I'm a fit for Flutter Developer at Tradelab Technologies:

- Delivered WebSocket-based real-time sync with sub-100ms latency and 99% uptime in a production SaaS platform (Echo)
- Shipped a cross-platform React Native app to 1300+ users with centralized state management (Redux)
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on JWT/OAuth authentication and secrets management experience across multiple production projects

Sincerely,

Rajat Gangwar
