Hiring Team

Adsremedy Media LLP

Backend Developer (Golang)

I'm writing to apply for the Backend Developer (Golang) role at Adsremedy Media LLP. As a Software Development Engineering Intern at Clink AI, I design and build backend systems end-to-end — REST APIs, database-backed services, and CI/CD pipelines — and I'm actively picking up Go to broaden my backend language range.

My project work reflects the systems-design thinking this role calls for: Echo is a full-stack platform with a scalable multi-tenant architecture and a real-time database layer serving production traffic with 99% uptime. Vibe pairs a Node/tRPC back-end with a secure containerized sandbox (Docker) for safely running generated code, plus a durable, checkpointed workflow engine for orchestrating multi-step jobs — the same reliability and architecture-first mindset this role needs, even though my hands-on experience is currently in Node.js and Python rather than Go.

I bring strong backend fundamentals (REST API design, PostgreSQL/MongoDB, microservices-style architecture, Docker), a track record of mentoring (100+ students trained in DSA and technical skills), and a fast ramp-up history — I'm comfortable deepening my Go, distributed systems, and OLAP/OLTP database knowledge quickly to meet this team's needs.

Why I'm a fit for Backend Developer (Golang) at Adsremedy Media LLP:

- Built Echo and Vibe — production-grade backend systems with multi-tenant architecture, REST APIs, and Docker-based containerization
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Proven mentoring track record — trained 100+ students in DSA and resume building, alongside hands-on CI/CD release ownership at Clink AI
- Fast ramp-up history across new languages and stacks — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
