Hiring Team
Sphinx Defense
Full Stack Software Engineer

Dear Hiring Team,

I'm writing to apply for the Full Stack Software Engineer role at Sphinx Defense. I bring hands-on experience building **responsive, component-based** frontends and **containerized** backend **APIs** across production SaaS platforms, backed by strong **relational database** and **testing** practices.

At Clink AI, I built **responsive React** interfaces with **REST API**-driven state management and **service-to-service communication**, improving page load speed by 30% for 1300+ users. In my Vibe and Skimly projects, I built **full-stack** platforms with **Docker**-containerized backends, **PostgreSQL**-backed **relational databases**, and **REST/tRPC API** layers, writing optimized **parameterized SQL** queries for data integration.

I'm comfortable owning features end to end, from responsive UI development through backend API design to deployment, and I maintain code quality through Git-tracked fixes and **code reviews**. I'm eager to bring this full-stack foundation to mission-critical software development.

Why I'm a fit for Full Stack Software Engineer at Sphinx Defense:

- Built **responsive, component-based** React/Next.js frontends backed by **containerized (Docker)** APIs and **PostgreSQL** databases (Vibe, Skimly)
- Hands-on with **relational database** querying, **parameterized SQL**, and **REST/tRPC API** integration across production projects
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong analytical and problem-solving foundation
- Fast ramp-up ability: consistently picks up new stacks and frameworks (**Docker**, containerized sandboxes, relational schemas) across every project

Sincerely,
Rajat Gangwar
