Hiring Team

Fujitsu (1Finity Business Unit)

Software Engineer Apprentice, Job ID 11840

I am writing to apply for the Software Engineer Apprentice role (Job ID 11840) with Fujitsu's 1Finity Business Unit. I bring a strong foundation in programming fundamentals and data structures & algorithms, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved in C++, along with hands-on production experience across the full software development lifecycle.

As a Software Development Engineering Intern at Clink AI, I work daily with REST APIs, Git-based Agile/Scrum workflows, and Linux (Fedora), while also having built a production-ready AI platform (Vibe) that runs untrusted code inside a custom Docker sandbox. On Echo, a multi-tenant B2B SaaS platform, I used AWS Secrets Manager for secure per-tenant credential storage — direct, practical exposure to cloud-native infrastructure.

I am comfortable in Python and C++ as core languages, and I am actively deepening my understanding of TCP/IP and HTTP/HTTPS networking fundamentals to complement my algorithmic and systems-level strengths. I am eager to bring this fast-ramping, fundamentals-first approach to Fujitsu's engineering team.

Why I'm a fit for Software Engineer Apprentice at Fujitsu:

- **Strong programming fundamentals & DS&A:** 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard) in C++ — directly matching the JD's core screening criteria.
- **Real cloud & Docker experience:** Built Vibe, an AI code-generation platform running untrusted code in a custom-built Docker sandbox (E2B), and used AWS Secrets Manager for secure credential storage on Echo, a multi-tenant SaaS platform.
- **Production SDLC & Agile exposure:** Ship production software as an SDE Intern at Clink AI using REST APIs, Git, and Agile/Scrum practices (Jira) end to end.
- **Fast ramp-up, Linux-native:** Daily Fedora Linux user comfortable in Python and C++, with a demonstrated track record of shipping production software quickly across unfamiliar stacks.

Sincerely,
Rajat Gangwar
