Hiring Team

PIPRA Solutions

Solution Engineer (Full Stack Developer)

I'm writing to apply for the Solution Engineer (Full Stack Developer) role at PIPRA Solutions. As a Software Development Engineering Intern at Clink AI, I build complete features end-to-end — React frontends, cross-platform mobile apps, and REST APIs — and I bring strong Node.js backend experience alongside a genuine interest in deepening my Java/Spring Boot skills.

At Clink AI, I engineered a cross-platform React Native app shipping 8+ screens to 1300+ users, built responsive web interfaces with React, and architected REST API-driven state management — the same full-stack frontend-to-backend ownership this role calls for. My project work adds production API and database range: Echo and Vibe are both full-stack platforms with REST APIs and PostgreSQL databases, and I'm comfortable applying that same backend design thinking in Java/Spring Boot alongside my current Node.js stack.

I bring strong problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), hands-on REST API and database design experience, and a fast ramp-up track record — I'm comfortable deepening my Java, Spring Boot, and Flutter experience quickly to fit this team's full stack.

Why I'm a fit for Solution Engineer (Full Stack Developer) at PIPRA Solutions:

- Shipped a cross-platform React Native app to 1300+ users, directly transferable cross-platform mobile experience
- Built Echo and Vibe — full-stack platforms with REST APIs, PostgreSQL databases, and AWS deployment
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Proven fast ramp-up track record — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
