Hiring Team
RedString
Founding Engineer

I'm writing to apply for the Founding Engineer role at RedString. As a Software Development Engineering Intern at Clink AI, I ship full-stack features end-to-end — React/Next.js frontends, REST APIs, and the data layer connecting them — and outside of work I've built multiple production-grade AI agent systems from scratch, which is exactly the intersection this role sits at.

My project work maps closely onto what you're building: Echo is a full-stack B2B SaaS platform with an LLM tool-calling agent (3 Zod-typed tools for search, resolution, and human-approval escalation), a RAG pipeline over vector embeddings, and a WebSocket-based real-time database delivering 99% uptime. Vibe is an AI code-generation platform with a multi-agent workflow, durable state and checkpointed asynchronous processing pipelines with retry and failure recovery, and a secure containerized sandbox for running untrusted AI-generated code — the same LLM/agent integration and reliability-focused systems design this role calls for.

I bring strong Next.js/React/TypeScript frontend experience, hands-on REST API and database design, and a fast ramp-up track record — I'm comfortable deepening my Python/FastAPI backend work and formal testing discipline (Vitest, pytest) quickly to match this team's stack end-to-end.

Why I'm a fit for Founding Engineer at RedString:

- Built Echo (LLM tool-calling agent, RAG pipeline, real-time database) and Vibe (multi-agent workflow, durable async pipelines, secure sandboxing)
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on full-stack ownership at Clink AI: Next.js/React frontend, REST API-driven state management, and CI/CD release pipelines
- Proven fast ramp-up and mentoring track record — trained 100+ students in DSA/resume building, and shipped 8+ production screens within a single year

Sincerely,
Rajat Gangwar
