Hiring Team

Barclays

Full Stack Engineer (Job ID: JR-0000123867)

Dear Hiring Team,

I'm excited to apply for the Full Stack Engineer role in Trade and Working Capital at Barclays. As a B.Tech graduate from NIT Prayagraj building production React/Next.js applications backed by REST APIs and relational/NoSQL databases, I'm well-suited to delivering full-stack solutions across UI, APIs, and data layers.

I build responsive React interfaces and REST API-driven backends daily at Clink AI, using Git, code reviews, and AI-assisted development (Claude Code, Cursor) to keep a production codebase maintainable – directly matching this role's emphasis on AI-assisted developer tools. I've also independently built full-stack AI platforms with agentic AI workflows, LLM tool calling, and RAG pipelines, aligning with the GenAI and AI-agent skills this role values.

While my recent backend work has been in Node.js/Express, I'm actively picking up Java and Spring Boot to round out my readiness for this role's JVM stack, and I'm comfortable with PostgreSQL, MongoDB, and REST API design. I bring strong analytical and problem-solving instincts from solving 1000+ DSA problems, and I collaborate well with cross-functional teams.

Why I'm a fit for Full Stack Engineer at Barclays:

- Built and shipped full-stack features (React, REST APIs, PostgreSQL/MongoDB) to 1300+ production users as an SDE Intern at Clink AI, using Git, code reviews, and AI-assisted development daily.
- Built AI-integrated SaaS products end to end (Echo, Vibe) with agentic AI workflows, LLM tool calling, and RAG pipelines – directly matching the JD's highly-valued GenAI/AI-agent skills.
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved, reflecting strong analytical thinking and problem-solving ability.
- Fast ramp-up ability: daily use of Git, REST API design, and AI-assisted developer tools, with quick pickup of new backend stacks (currently Java/Spring Boot).

Sincerely,

Rajat Gangwar
