Hiring Team
Harmonic Inc.
Bengaluru, India

I am writing to apply for the Associate SW Development Engineer role (Job ID 260140) on the Broadband Devices Team at Harmonic. I bring a strong C++/C programming foundation, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved in C++, along with a genuine interest in systems-level engineering.

As a Software Development Engineering Intern at Clink AI, I diagnose and resolve production defects using Sentry crash reports and DevTools, applying a reproduce-isolate-resolve debugging discipline daily. I also built a file-manager API twice from scratch — once on raw Node.js primitives and once on Express — specifically to understand what a framework abstracts away at the HTTP and stream level, the same instinct that draws me toward lower-level systems work.

I am a daily Linux user (Fedora) comfortable in Python and Bash, and I am actively deepening my knowledge of networking fundamentals and embedded systems to complement my algorithmic strengths. I am eager to bring this debugging discipline and fast-ramping approach to Harmonic's broadband infrastructure team.

Why I'm a fit for Associate SW Development Engineer at Harmonic:

- **Strong C++/C & algorithmic foundation:** 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard) in C++ — directly matching the JD's core programming requirement.
- **Real debugging discipline:** Diagnosed and resolved production defects using DevTools, debuggers & Sentry crash reports as an SDE Intern at Clink AI, applying a reproduce-isolate-resolve methodology that transfers to cross-layer system debugging.
- **Systems-level curiosity:** Built a file-manager API twice — raw Node.js http vs. Express — to understand low-level request handling and stream-based I/O beneath framework abstractions.
- **Fast ramp-up, Linux-native:** Daily Fedora Linux user comfortable in Python and Bash, with a demonstrated track record of shipping production software quickly across unfamiliar stacks.

Sincerely,
Rajat Gangwar
