Hiring Team

SJTech Solutions

Artificial Intelligence Developer

I am writing to apply for the Artificial Intelligence Developer role at SJTech Solutions. I have built multiple production AI applications in Python-adjacent full-stack environments, including Echo, a B2B AI platform with a RAG pipeline and vector embeddings, and Vibe, an autonomous AI coding agent running an agentic loop of LLM function calling.

My AI experience is concentrated in applied, LLM-based systems — retrieval-augmented generation, vector search, prompt engineering, and multi-tool AI agents — rather than classical model training, and I have a working Python foundation from my CS coursework that I am actively building on. I am eager to extend that foundation into the machine learning and deep learning work your team does, backed by strong CS fundamentals from a 6-star CodeChef rating and 1000+ DSA problems solved.

I bring a fast ramp-up track record — I have picked up new frameworks and tools quickly at Clink AI, shipping 8+ production screens and 400+ analytics events in under a year — and I am excited to bring that same speed to AI model development and automation scripting at SJTech Solutions.

Why I'm a fit for Artificial Intelligence Developer at SJTech Solutions:

- Built Echo, an AI platform with a RAG pipeline, vector embeddings, and an LLM-powered support agent
- Built Vibe, an autonomous AI coding agent running an agentic loop across multiple tools
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong Python/CS fundamentals for ML and deep learning work
- Proven fast ramp-up on new tools and technical domains — shipped production features at Clink AI in under a year

Sincerely,

Rajat Gangwar
