Hiring Team

NeoGenCode Technologies Pvt Ltd

Flutter Developer

I'm writing to apply for the Flutter Developer role at NeoGenCode Technologies. As a Software Development Engineering Intern at Clink AI, I build and ship cross-platform mobile applications end-to-end — React Native, iOS & Android — and I bring the same cross-platform mobile mindset to Flutter, alongside strong REST API and state-management experience.

At Clink AI, I engineered a cross-platform React Native app shipping 8+ screens to 1300+ users, architected a centralized Redux store syncing UI on REST API-driven updates, and diagnosed production issues from Sentry crash reports across both Android and iOS — the same debugging, performance optimization, and state-management discipline that BLoC and clean architecture demand in Flutter. My project work adds full-stack range: Echo and Vibe are both production platforms with REST APIs and structured, layered architecture.

I bring strong logical problem-solving fundamentals (a 6-star CodeChef rating and 1000+ DSA problems solved), Git-based version control experience, and a fast ramp-up track record — I'm comfortable picking up Flutter, Dart, and BLoC state management quickly given my depth in React Native's parallel patterns.

Why I'm a fit for Flutter Developer at NeoGenCode Technologies:

- Shipped a cross-platform React Native app to 1300+ users with 8+ screens, directly transferable cross-platform mobile experience
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Hands-on mobile debugging and performance optimization across Android & iOS, plus centralized state management (Redux) at Clink AI
- Proven fast ramp-up track record — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
