Hiring Team

Beyond Technologies

Full Stack AI Engineer (Job Code: BUILD)

Dear Hiring Team,

I'm writing to apply for the Full Stack AI Engineer role at Beyond Technologies. As a Software Development Engineering Intern at Clink AI, I design and ship complete systems end-to-end — frontend, backend APIs, and data layers — while working daily with LLM tool calling, retrieval, and agentic workflows in my own AI projects.

My project work lines up closely with what this role builds: Echo is a full-stack B2B SaaS platform with a RAG pipeline, vector search, and an AI support agent using LLM tool calling and structured outputs, plus real-time voice agents via Vapi. Vibe is a multi-agent coding platform with a durable-state agentic loop, tool calling across multiple tools, and a secure Docker/E2B sandbox for running untrusted AI-generated code — durability, retries, and tool orchestration this role is built around.

I bring strong Python, JavaScript and TypeScript fundamentals, hands-on experience with containers, CI/CD, and production monitoring (Sentry, Mixpanel), and a fast ramp-up track record — I'm comfortable deepening my MCP and Document AI/OCR knowledge quickly to fit this team's stack.

Why I'm a fit for Full Stack AI Engineer at Beyond Technologies:

- Built Echo (RAG pipeline, vector search, LLM tool-calling agent, real-time voice agents via Vapi) and Vibe (multi-agent coding workflow with durable state, tool calling, and a Docker/E2B sandbox)
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Production experience with observability, debugging, incident response (Sentry, Mixpanel), and CI/CD release pipelines
- Proven fast ramp-up across new languages and stacks — shipped 8+ production screens and 400+ Mixpanel analytics events within a single year

Sincerely,

Rajat Gangwar
