Signett

Founding Product Engineer, Developer Adoption

I'm writing to apply for the Founding Product Engineer, Developer Adoption role at Signett. I'm a full-stack TypeScript engineer with hands-on experience building the exact kind of developer-facing, agent-integrated software this role is about — AI agents with tool calling, SDK-style integrations, and the browser-facing surfaces that make them adoptable.

At Clink AI, I ship a cross-platform React Native/TypeScript app to 1300+ users end-to-end, and I've diagnosed production issues directly from crash reports using browser and native DevTools — the same debugging instinct this role needs when working inside external codebases. My project work is directly relevant to “agent-ready” integration work: Echo is a full-stack TypeScript B2B platform where I built an AI support agent using 3 Zod-typed tool-calling functions, and Vibe is an autonomous AI coding agent that runs a tool-calling loop to write, execute, and self-correct code in the browser — both required me to design clean, well-documented tool/function interfaces for an LLM to consume reliably, the core skill behind MCP and WebMCP-style integrations.

I bring strong full-stack fundamentals (React, Next.js, Node.js, REST APIs), a track record of shipping fast in ambiguous, undocumented codebases, and genuine curiosity about emerging agentic web standards. I'm comfortable picking up Playwright, Cypress, and WebMCP quickly given my depth in TypeScript, browser APIs, and LLM tool-calling design.

Why I'm a fit for Founding Product Engineer, Developer Adoption at Signett:

- Built and shipped multiple production TypeScript full-stack platforms (Echo, Vibe) with LLM tool-calling/function-calling interfaces — the same integration surface WebMCP/MCP formalizes
- Shipped a cross-platform React Native/TypeScript app to 1300+ users, with hands-on DevTools-based debugging across unfamiliar codebases
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Comfortable moving across engineering, documentation, and hands-on integration work — exactly the cross-functional loop this role repeats

Sincerely,

Rajat Gangwar
