Hiring Team

DEIC — L&T Precision Engineering & Systems IC

Larsen & Toubro

Mumbai, India

Dear Hiring Team,

I am writing to apply for the Software Engineer role (D&DC Land Systems, Job ID LNT/SE-LS/1713751) at L&T Precision Engineering & Systems IC. I bring a strong foundation in C/C++, operating systems, and multi-threaded/multi-process programming, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved.

As a Software Development Engineering Intern at Clink AI, I have shipped production software across mobile, backend, and DevOps surfaces — architecting centralized state management, automating build pipelines, and diagnosing production issues through systematic debugging with DevTools and emulators. This experience has sharpened the debugging discipline and systems thinking the role calls for, even though my day-to-day stack has been application-layer rather than embedded.

I am eager to build on my CS fundamentals in Linux, IPC, and distributed systems, and to grow into the multi-threaded, protocol-level (Serial, CAN, Ethernet, ModBus) development this position demands. I learn quickly, having shipped multiple full-stack AI platforms end to end while ramping on unfamiliar stacks each time.

Why I'm a fit for Software Engineer at L&T:

- **Systems & debugging discipline:** Diagnosed and resolved production defects using DevTools, debuggers & emulators as an SDE Intern at Clink AI, applying the same root-cause debugging rigor this role needs.
- **Strong CS & algorithmic foundation:** 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard) — directly relevant to the analytical and problem-solving bar for systems software work.
- **Fast ramp-up on new stacks:** Shipped multiple production-grade full-stack platforms (Echo: multi-tenant SaaS with RAG & voice AI) by quickly mastering new tools and architectures — the same adaptability I would bring to C/C++, Linux, and RTOS-based development.
- **Engineering fundamentals:** Solid grounding in operating systems, multi-threading, and multi-process programming from B.Tech coursework (MNNIT, CGPA 8.0), ready to be applied to distributed, intercommunicating systems.

Sincerely,

Rajat Gangwar
