Hiring Team

SalaryBox

Mobile App Developer

I'm writing to apply for the Mobile App Developer role at SalaryBox. As a Software Development Engineering Intern at Clink AI, I own mobile features end-to-end — API integration, state management, offline behavior, and full release ownership through Play Console and App Store Connect — shipping a cross-platform app to 1300+ users.

At Clink AI, I configured EAS CLI for builds and store submissions, cutting release turnaround by 40%, while diagnosing production crashes from Sentry reports on Android and iOS. My current mobile stack is React Native rather than native Kotlin/Swift, but the underlying discipline — data layer design, crash triage, release ownership — transfers directly, and I'm comfortable picking up Kotlin/Swift and Jetpack Compose/SwiftUI quickly given their close mapping to React's component and state model.

I'm also a daily user of Claude Code and Cursor for AI-assisted development, with strong code-review judgment built from reviewing both my own and AI-generated code across multiple production SaaS projects (Echo, Vibe) — directly matching this role's emphasis on AI coding fluency with rigorous review.

Why I'm a fit for Mobile App Developer at SalaryBox:

- Shipped a cross-platform React Native app to 1300+ users with full release ownership (EAS builds, Play Console/App Store, 4 OTA updates)
- Daily fluency with Claude Code and Cursor, backed by strong code-review judgment on AI-generated code across production projects
- Hands-on crash and performance debugging (Sentry, DevTools) across Android & iOS in production
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)

Sincerely,

Rajat Gangwar
