Best Trading Company

Software Developer - Remote / Part-Time

I am writing to apply for the Software Developer (WFH & Part-Time) role at Best Trading Company. As a Software Development Engineering Intern at Clink AI, I build and ship full-stack, production features across React, React Native, Next.js, JavaScript, and TypeScript to 1300+ users, and I am comfortable ramping quickly across languages and frameworks a team needs.

My project work spans the breadth your role calls for: Echo is a full-stack B2B SaaS platform built with React, Next.js, and Node.js, with a multi-tenant architecture and REST APIs. Vibe is a production-ready SaaS platform with a Node.js/tRPC/REST backend, a PostgreSQL database, and a Docker-built containerized execution environment - the same combination of front-end, backend, and database work your listing describes.

I have hands-on experience with Python and SQL alongside my core JavaScript/TypeScript stack, and I am quick to pick up additional languages and frameworks on the job - I have done it repeatedly across React Native, TypeScript, and Redux in my current role.

Why I'm a fit for Software Developer at Best Trading Company:

- Built **Echo**, a full-stack **B2B SaaS platform (React, Next.js, Node.js)** with **multi-tenant architecture** and **REST APIs**
- Built **Vibe**, a production-ready SaaS platform with a **Node.js/tRPC/REST** backend, **PostgreSQL** database, and **Docker**-based execution environment
- **6-star CodeChef** (2200+ rating, peak 2212) and **1000+ DSA problems solved in C++** — strong cross-language problem-solving foundation
- Proven fast ramp-up across **React, React Native, TypeScript, Python**, and **SQL** — shipped **8+ production screens** and **400+ analytics events** at Clink AI in under a year

Sincerely,
Rajat Gangwar
