Hiring Team

NeoGenCode Technologies Pvt Ltd

Full Stack Developer (React.js/Next.js + PHP/Node.js)

I'm writing to apply for the Full Stack Developer role at NeoGenCode Technologies. As a Software Development Engineering Intern at Clink AI, I build complete features end-to-end — React/Next.js frontends, Node.js APIs, and the databases behind them — and I bring real production PHP/MySQL experience from a prior internship at ITJOBXS alongside my current React/Node stack.

At ITJOBXS, I built a real-time REST API for email domain validation that cut spam registrations by 87.34%, and used MySQL queries to purge 600+ fake accounts — hands-on PHP/MySQL work directly relevant to this role's backend flexibility between PHP and Node.js. My project work adds the React/Next.js range: Echo and Vibe are both full-stack platforms built on Next.js with REST APIs, PostgreSQL databases, and production deployment on Vercel.

I bring strong JavaScript, TypeScript and PHP fundamentals, hands-on REST API and database experience (PostgreSQL, MySQL, MongoDB), Git-based version control, and a fast ramp-up track record — I'm comfortable deepening my Next.js rendering strategies (SSR/SSG/ISR) and Laravel experience quickly to fit this team's stack.

Why I'm a fit for Full Stack Developer at NeoGenCode Technologies:

- Built a production REST API and MySQL-backed spam-prevention system at ITJOBXS (87.34% spam reduction, 600+ fake accounts purged)
- Built Echo and Vibe — full-stack Next.js platforms with REST APIs, PostgreSQL databases, and Vercel deployment
- Strong data structures and algorithms fundamentals, backed by a 6-star CodeChef rating (2200+, peak 2212) and 1000+ DSA problems solved (75% Medium/Hard)
- Proven fast ramp-up track record — shipped 8+ production screens and 400+ analytics events within a single year

Sincerely,

Rajat Gangwar
