Hiring Team
EcoRatings
Frontend Developer

I am writing to apply for the Frontend Developer role at EcoRatings. As a Software Development Engineering Intern at Clink AI, I build responsive, component-based interfaces with React Hooks and Tailwind CSS, applying code splitting and lazy loading to improve page load speed by 30% across the platform, and I work with Redux and Context API for complex application state.

My project work spans exactly the frontend-plus-AI collaboration your role calls for: Echo is a full-stack B2B SaaS platform with a RAG pipeline and vector search, where I built the UI layer visualizing AI agent responses and knowledge-base-aware answers. Vibe is a production-ready SaaS platform with a React/Next.js frontend and live preview rendering of AI-generated output — directly relevant to visualizing RAG pipeline and LLM data alongside AI/ML engineers.

I have hands-on experience with TypeScript, Git, and performance optimization techniques (code splitting, lazy loading), and I am quick to pick up new UI libraries and build tooling — I have shipped 8+ production screens and 400+ analytics events at Clink AI in under a year.

Why I'm a fit for Frontend Developer at EcoRatings:

- Built responsive React/Tailwind interfaces with code splitting and lazy loading, improving page load speed by 30% at Clink AI
- Built Echo, a full-stack AI SaaS platform with RAG pipeline and vector search — direct experience visualizing AI/LLM data in the UI
- Built Vibe, an AI code-generation platform with live preview rendering — React/Next.js frontend work paired with AI-generated output
- 6-star CodeChef (2200+ rating, peak 2212) and 1000+ DSA problems solved — strong problem-solving foundation for scalable frontend work

Sincerely,
Rajat Gangwar
